PASSAGE

Experts are beginning to suspect that one of the major 141 of crime in modern cities in the actual design of the city. Oscar Newman, a professor of architecture, in his book titled "Defensible Space" has 142 the result of his research on this question.

The effect of environment 143 crime is two-fold.

Prof. Newman's research shows that some buildings may encourage people not only to interfere but to allow crimes to 144. Crowded apartments in a huge block bring people physically together but isolate them 145. People living in what is 146 one building with a common entry felt isolated within their own apartments.

They are unconcerned 147 their neighbours. Some years ago, a girl was stabbed to death 148 a period of half an hour while hundreds of people living in the block 149 without interfering, without even calling the police.

The other obvious effect of the design of buildings is that it affords room for crimes. Hidden nooks and corners, spaces between buildings out of 150 are convenient spots where crimes can be committed without the fear of detection.
